## Image Builder

### Artifacts

**InstallSoftware.ps1** – simple script that uses the software install library to custom install software on the image

**InstallSoftwareLibrary.psm1** - comprehensive set of functions for multiple types of installation e.g. MSI, EXE, VSIX, copy and unzip, python modules, registry entries etc.

**ValidateEnvironment.ps1** – script used to validate that the software has installed correctly

**DeprovisioningScript.ps1** – a customised deprovisioning script to generalise the image

Traditional AVD
